CIS Data Links

CIS services are compatible with on farm and advisor software.

One of the great benefits of recording with CIS is that 'Your Herd' can be used as a standalone tool or be used in conjunction with software that is already present on farm, or used by your advisors.

CIS strives to be compatible with all on farm software, and link to the majority of parlour software available in the UK.

Data Links:-

CIS has developed two-way data exchange links; you choose the software that suits your individual needs.
