

CIS Laboratory

The CIS Laboratory in Shropshire is UKAS accredited to ISO/IEC 17025:2005.

An internationally recognised laboratory, it uses innovative state of the art equipment ensuring milk recorded samples are analysed uniformly extracting a wealth of information. Results help make strategic decisions about individual cows or the whole herd.

The laboratory also operates a Pregcheck screening service for the detection of Pregnancy-associated Glycoproteins found in milk during pregnancy as early as 35 days after breeding.

CIS operate a highly sophisticated Quality Management System to ensure full confidence in each result reported.

- Compositional analysis for Butterfat, Protein, Lactose, Urea, Caesin and Somatic Cell counts
- Capability for analysis of Fatty acids and Ketosis
- State of the art automation and equipment to ensure fast turnaround of results
- Samples analysed uniformly to ensure full traceability and confidence in each result
- Ever expanding Elisa Health testing suite from the one milk recorded sample
- Milk analysis for Johnes, BVD, IBR, Leptosira, Neospora
- Pregcheck screening service
- BVDV Tissue and Blood analysis
- Capability for analysis of all diseases using blood
